Patient Information

ORIGINAL STATEMENT

Patient name: vivek. Age: 20. Gender: Male. Query: i have fever for past 2 days along with cold and cough

TRANSLATED STATEMENT

Patient name: vivek. Age: 20. Gender: Male. Query: i have fever for past 2 days along with cold and cough

Complexity Assessment

COMPLEXITY LEVEL

LOW

ASSESSMENT REASON

The patient presents with common symptoms of a viral upper respiratory infection (fever for 2 days, cold, cough), which are typically self-limiting and manageable with home care and over-the-counter medications.

Diagnosed Condition

Acute Viral Upper Respiratory Infection (Common Cold/Flu-like symptoms)

Precautions & Safety Measures

- Get plenty of rest to help your body recover
- Stay home to avoid spreading the infection to others
- Cover your mouth and nose when coughing or sneezing, preferably with a tissue or your elbow

Dietary Recommendations

Foods to Include

- Warm fluids like water, herbal tea, clear broths, and soups
- Fresh fruits and vegetables (e.g., citrus fruits for Vitamin C)
- Easily digestible foods like rice, toast, and porridge

Foods to Avoid

- Sugary drinks and processed foods
- Alcohol and caffeine
- Spicy or very oily foods that might irritate your throat or stomach

Recommended Medications

- Paracetamol (Acetaminophen) for fever and body aches (follow dosage instructions)
- Ibuprofen for fever, pain, and inflammation (follow dosage instructions)

Natural Remedies & Home Care

- Steam inhalation (e.g., from a bowl of hot water with a towel over your head) to relieve nasal congestion and cough
 - Gargle with warm salt water (1/2 teaspoon salt in a glass of warm water) for sore throat relief
 - Drink ginger tea with honey for cough and soothing effects
-

Activity & Lifestyle

Rest as much as possible; avoid strenuous activities and exercise until symptoms improve significantly.

Follow-Up Guidance

Follow-up Timeline: If symptoms worsen or do not improve after 5-7 days, or if new severe symptoms appear.

Seek Immediate Medical Attention If:

1. High fever (above 102°F or 39°C) that doesn't respond to medication
2. Difficulty breathing or shortness of breath
3. Severe chest pain or persistent wheezing
4. Persistent vomiting or inability to keep fluids down
5. Severe sore throat making it difficult to swallow

General Health Advice

- Wash your hands frequently with soap and water to prevent further spread of germs
 - Stay well-hydrated by drinking fluids regularly throughout the day
-

- Avoid smoking and exposure to secondhand smoke, as it can worsen cough and irritation
